

Profile I get AI adopted. I work with clients and internal teams to find the use cases worth doing, define them, roll them out and support people until AI is part of their daily work. Much of my work is voice AI for customer contact, including voice agents in a live contact-centre platform. I sit between business stakeholders and engineering, and I can build what I propose, so clients see a working proof of concept before they commit.

- Experience**
- AI Consultant** ASEE Solutions · Remote Jan 2026 - Present
- Identify and define AI use cases with clients; translate business needs into technical requirements for the dev team.
 - Advise on bringing AI tools into employees' daily work and support teams through adoption.
 - Deliver voice AI agents for clients, from scenario definition and functional spec to production.
 - Coordinate and track AI features on the ASEE Live platform: AI agent assist, AI agent integration, knowledge base, call transcription, post-call analytics.
 - Built internal AI tools (MCP servers) connecting AI assistants to internal business systems; rolled them out to colleagues and supported them.
 - Work with AI vendors on technical evaluation, commercial models and GDPR compliance.
 - Evaluate alternatives: open-source voice agent frameworks (Pipecat, LiveKit Agents), speech recognition (Faster Whisper), Croatian TTS (fine-tuning XTTS v2).
 - Presales: technical consulting, proposals, presentations and proof-of-concept demos; live demos and talks at conferences.
- AI Developer** ASEE Solutions · Remote Mar 2025 - Dec 2025
- Integrated ElevenLabs conversational AI and voice agents into the ASEE Live platform.
 - Built LLM and RAG-based solutions.
 - Automated internal processes, e.g. automatic classification and routing of incoming email.
 - Built a product documentation system on Zensical with a semi-automated content maintenance process.
 - Prepared and ran product demos for prospects; presented AI capabilities to non-technical audiences.
- Founder** KodAI · Remote Nov 2024 - Present
- Independent AI consulting and implementation for small and medium businesses.
 - Run AI integration and automation projects end to end: needs analysis, build, client communication, delivery.
 - Advise on applying LLMs and RAG in business; business process automation (n8n, Python, REST API integrations).
- Intern** AI Center Lipik · On-site Apr 2024 - Sep 2024
- Computer vision models (object detection and classification in images and video), dataset preparation and labelling, LLM/RAG prototypes; Python with PyTorch, Hugging Face and OpenCV.

Capabilities	AI ADOPTION & ENABLEMENT	TECHNICAL
	Use case discovery, business value assessment, rollout and change management, team training and support, functional specs, presales and PoCs, vendor management, GDPR in AI solutions.	LLM integration, RAG, voice agents, MCP, LangChain / LangGraph, LiveKit, Pipecat, ElevenLabs, n8n, Claude Code, Codex, Python, FastAPI, REST APIs, PyTorch, Hugging Face, Docker, AWS.
